

KS1 Science flip learning for the week beginning: 26th April 2021

This term our topic in Science is **Living in Habitats**, so I would like you to:

- Draw at least three living things that you find in your environment (setting, around you)
- Now write a sentence to explain your reason for considering (thinking) them alive
- Here is an example to get you started...

Plants around us...

Plants are alive! Just because they don't run around doesn't mean they are not alive! They breathe, grow and reproduce like all other living organisms.
